## SUMMARY

---

Motivated and detail-oriented professional with a strong background in Artificial Intelligence, Machine Learning, and Computer Science, experienced in using tools and technologies such as Python, Java, Google Colab, VS Code, and image processing techniques. Skilled in problem-solving, teamwork, and delivering efficient solutions under tight deadlines. Quick to adapt and committed to continuous learning, with a passion for contributing to innovative and high-quality outcomes in dynamic environments.

## PROJECTS

---

### Machine Learning

[GitHub Link](#)

Developed a machine learning-based system for detecting deepfake images using Convolutional Neural Networks (CNN) and Support Vector Machines (SVM). The project focused on identifying subtle artifacts and inconsistencies in facial structures to distinguish between real and fake images. Techniques such as Histogram of Oriented Gradients (HOG), frequency analysis, and facial landmark detection were employed for feature extraction. Evaluated models including XGBoost, AdaBoost, CatBoost, and ANN, with XGBoost achieving a testing accuracy of 91 percentage. The system supports real-time detection and contributes to enhanced digital media integrity, making it valuable for applications in media verification, digital forensics, and cybersecurity.

### Fake Currency Detection

[GitHub Link](#)

Designed and implemented a fake currency detection system using image processing and machine learning techniques. The system captures images of Indian currency notes and processes them through grayscale conversion, edge detection, and segmentation. Key features such as watermarks, security threads, serial numbers, and bleed lines are extracted for analysis. Artificial Neural Networks and Principal Component Analysis (PCA) are used to classify notes as genuine or counterfeit. The model was trained on a dataset of real and fake notes to improve accuracy. A user-friendly interface was developed using MATLAB, enabling efficient and real-time detection suitable for practical applications.

## ACHIEVEMENTS

---

Achieved 1st prize in codeHunt conducted by VFSTR.

## CERTIFICATIONS

---

Participation certificates in Hackathon  
Certified by cambridge university(B1 level)

## EDUCATION
