CAREER OBJECTIVE

Motivated and ambitious individual seeking an entry-level position in a forward-thinking organization. Eager to contribute strong coding and analytical skills to solve complex technical challenges. A quick learner with the ability to adapt to new technologies and frameworks efficiently.

EDUCATION

- **Vignan's Foundation for Science, Technology & Research** 2021-2025
B. Tech in Computer Science and Technology, CGPA:8.65/10
- **Narayana Junior College** 2019-2021
Intermediate, CGPA: 9.6/10
- **Vidya Bharathi School** 2018-2019
Secondary School – SSC, CGPA:9.7/10

TECHNICAL SKILLS

- **Programming Skills:** Python, C, Java (Basics)
- **Web Technologies & Databases:** Html, CSS, SQL, Database management
- **Coursework:** Machine Learning, Deep Learning.
- **Visualization Tools:** Power BI (Basics).
- **Software packages:** Notepad, MySQL Workbench, Command Prompt, Google Collaboratory

PROJECTS

- **Mango Leaf Disease Detection Using CNN Notification Through E Mail** 2023

Developed a machine learning and deep learning-based solution to detect leaf diseases. The system processes leaf images from specified file paths, accurately identifies diseases, and sends automated email notifications to users with detailed disease information, enabling timely awareness and intervention.
Technology: Python, Image Processing, Machine learning, Deep learning.
- **Deep Ensemble Classifier for Human Action Recognition using Pre-Trained CNN's** 2024

Developed a Deep Ensemble Classifier for Human Action Recognition using pre-trained Convolutional Neural Networks (CNNs). Combined multiple models to improve accuracy and robustness, enhancing classification performance and reducing overfitting. Applied transfer learning to adapt pre-trained models to a human action dataset, resulting in a highly efficient system.
Technology: Python, Machine Learning, Deep learning, Batch Normalization, Max pooling, CNN.
- **Web-based Transfer Learning Model for Identifying Date Palm Leaf Diseases and Recommending Pesticides** 2025

This project involved developing a web-based system that uses transfer learning to detect diseases in date palm leaves. The model analyzes uploaded images to identify the disease and then suggests pesticides for treatment. The system improves accessibility by enabling users to diagnose and respond to plant diseases online.
Technology: Python, Image Processing, Web Development, Transfer Learning, CNN.

CERTIFICATIONS

- Certification in PET by Cambridge University
- Certification in Public Speaking
- Completed courses in Software Testing, Leadership, and Team Effectiveness through NPTEL
- Earned Certification in Smart Interview Strategies
- Certification of Python, SQL and C languages from hacker rank platform

ACHIEVEMENTS

- Silver Medalist in Intra-University Koko Games for outstanding athletic performance.
- Secured 2nd place in Project Expo at the national-level technical event Vignan Mahotsav.

ACTIVITY

- Served as Event Coordinator during Vignan Mahotsav, the annual techno-cultural fest at Vignan's University, demonstrating leadership, teamwork and event management skills.

DECLARATION

I hereby declare that all the details mentioned above are true to the best of my knowledge and belief.
